Animal Health Science Acquires Equine Nutritional Hoof Supplement

Healthy hooves are key to preventing many diseases in horses that can lead to lesions and injuries. There is a direct link between dietary quality and rapid recovery of hoof wall injuries.

Hoof Rite was developed by a veterinarian who specializes in equine hoof care and equine dentistry. Hoof Rite contains the necessary vitamins and minerals that specifically target hoof growth and overall hoof health. The main ingredient, D-Biotin, when supplied at 15 mg per day, has been shown to increase growth rates and hoof hardness. It is a B-vitamin necessary for co-enzyme function to provide for protein and lipid synthesis. Protein is the major building block used for structural integrity of the horn wall.

Hoof Rite also contains d/l methionine, which improves horn quality, and zinc, which influences hoof hardness.

If a horse has brittle feet, cracks, trouble holding shoes, or poor hoof wall quality, a nutritional hoof supplement will benefit these conditions. Hoof Rite is the best combination of these nutrients to help with the structural and nutritional needs of the equine hoof.

Animal Health Science, LLC, an animal health company, founded in January of 2009, has acquired the top of the line equine hoof care supplement, Hoof Rite. And the 100% money back guarantee only reflects the belief that they have in quality and efficacy of the product. They are located in the southwest, in the city of Phoenix, Arizona.

For more information about Hoof Rite or to place an order, please visit us online at www.hoofrite.com or call 1-888-849-8655.
